

WESTERN REFRIGERATION PVT. LTD.

Business Requirements Document

Product: WRL Portal

Version: 1.0 draft

Date: 2026-09-02

Production: <https://wrl-dashboard.vercel.app>

Internal — Handover Documentation

Field	Value
Version	Production handover v1
Date	2026-09-02
Author	Delivery team
Approvers	Sunil (business sponsor), Rakesh / VP (acceptance)

1. Executive summary

WRL Portal is an internal web application for **Western Refrigeration Pvt. Ltd.** It provides MIS reporting, audit registers, automated email digests, and user/role administration on top of existing CRM service-call data. The portal does not replace the CRM; it reads CRM and local Postgres read-models to give branches and headquarters faster visibility for month-end close and daily operations.

Production: <https://wrl-dashboard.vercel.app>

2. Stakeholders

Role	Name	Interest
Business sponsor	Sunil	MIS close, branch visibility, digest routing
Acceptance authority	Rakesh / VP	Formal sign-off on delivered scope
HOD / MIS ops	Portal HOD role holders	National reports, BD-MIS, mail digests
Branch managers	Portal BM role holders	Branch-scoped registers and exports
IT / ops	Delivery + VPS ops	VPS workers, cron, env, read-model sync

Role	Name	Interest
Portal admins	Users with <code>manage_users</code> , <code>manage_roles</code> , or Mail & Alerts grants	User/role/mail configuration

2.1 Configured portal roles

Live role configuration (user counts and permissions) is exported from production on each handover run:

- [04-RBAC/ROLES_SNAPSHOT.md](#)
- [04-RBAC/RBAC_MATRIX.xlsx](#)

Edit roles in `/admin/roles` , then re-run `npm run handover:export` to refresh.

3. Business objectives

1. **Faster MIS close** — Summary, register, and accounts views with consistent open/solved math and Excel export.
 2. **Branch visibility** — Office-scoped filters; optional national scope for HOD roles.
 3. **Audit trails** — Serial, location, ARCP, warranty, cancelled-call, and Athena reconciliation registers.
 4. **Automated digests** — MIS email, major-repair alerts, cancelled-call digests without manual copy-paste.
 5. **Controlled access** — Role-based pages and tabs; admin-managed users.
-

4. Scope

In scope

See [SCOPE_SUMMARY.md](#) for the detailed in/out list.

Out of scope

- CRM data entry or status changes from the portal
 - Mobile technician app
 - Sub-second real-time CRM mirror
-

5. User personas and journeys

Branch manager

1. Log in → land on MIS Reports (or first permitted page).
2. Set date range and branch filters → view Summary tab.
3. Open Call Register → click TRN for live CRM call detail drawer.
4. Export register or summary to Excel/CSV.

HOD / MIS

1. Log in with national or multi-office scope.
2. Review BD-MIS and Accounts with client import merge (Coke/Cadbury rules).
3. Configure or receive scheduled MIS digests (if granted MIS email capability).
4. Review distribution, cancelled calls, or Athena failures as needed.

Portal administrator

1. Create users and assign roles in **User Management / Roles & Access**.
2. Configure **Mail & Alerts** — org outbound gate, routing rules, major-repair and cancelled recipients, subcontractor stock.
3. Monitor read-model sync on **Read-model sync** admin page.

6. Functional requirements (summary)

ID	Requirement
BR-01	Authenticated users access only pages/tabs granted by role
BR-02	MIS filters initialize to role baseline (branch scope); user adjusts per session; Clear all on Call Register
BR-03	MIS counts match between UI, export, and email digest (Cadbury-safe rules for mail)
BR-04	Call detail drawer loads live CRM data for a TRN
BR-05	Admins manage users, roles, and mail settings without code deploy
BR-06	Scheduled jobs on VPS send digests and run read-model sync per documented cron
BR-07	Security audit log for privileged actions (super-admin)

Detailed module behaviour: [02-Functional/FMS_Functional_Module_Spec.md](#) .

7. Non-functional requirements

Area	Requirement
Authentication	Supabase email/password; session on Vercel
Authorization	Application RBAC (<code>rbac-catalog</code>); office scope on queries
Data freshness	Read-model hot tables ~3 min behind CRM; drawer is live CRM
Hosting	Vercel (app) + Hostinger VPS (Postgres workers, mail, subcontractor)
Availability	Best-effort; VPS Postgres is single-node (see known limitations)
Email	Unified send path via MIS email module; relay on Vercel, SMTP on VPS

8. Dependencies and assumptions

- MS SQL CRM reachable from VPS sync workers
- VPS Postgres schema applied (`db:apply-read-model`)
- SMTP or relay credentials configured
- Supabase project for auth and `app_users` / roles tables

9. Acceptance criteria

- ☐ VPS environment checklist completed on production host (`05-Operations/VPS_ENV_VERIFICATION_CHECKLIST.md`)
- ☐ RBAC validated against live matrix (`04-RBAC/RBAC_MATRIX.xlsx` , `ROLES_SNAPSHOT.md`)
- ☐ Production URL accessible for agreed pilot users
- ☐ Formal sign-off recorded (`06-Delivery/DELIVERY_STATEMENT.md` §Sign-off)

10. Delivered requirements

ID	Requirement	Evidence	Status
BR-01	Role-based page/tab access	RBAC_DECISION_FLOW.md , live RBAC_MATRIX.xlsx	Delivered
BR-02	Role-baseline filters + in-session filter edits	FMS \$mis, ReportFiltersContext.tsx	Delivered
BR-03	MIS count consistency (UI/export/mail)	FMS \$MIS email, MAIL_SCHEDULE.md	Delivered
BR-04	Live CRM call drawer	FMS \$Call drawer, /api/calls/[id]	Delivered
BR-05	Admin user/role/mail without deploy	FMS \$Administration, /admin/* routes	Delivered
BR-06	VPS cron sync and mail	SYNC_ENTRY_POINTS.md , MAIL_SCHEDULE.md	Delivered
BR-07	Security audit log	FMS \$Security audit, super_admin capability	Delivered
