

WESTERN REFRIGERATION PVT. LTD.

Admin & User Guide

Product: WRL Portal

Version: 1.0 draft

Date: 2026-09-02

Production: <https://wrl-dashboard.vercel.app>

Internal — Handover Documentation

Status: Ready (text guide — no screenshots). Paths and behaviour match production at <https://wrl-dashboard.vercel.app>.

Non-technical walkthrough for portal users.

1. Signing in

1. Open <https://wrl-dashboard.vercel.app>
 2. Enter your assigned email and password.
 3. After login you land on your **default page** for your role — typically the first report you can access (often MIS Reports at `/report`).
-

2. Layout and navigation

The portal uses a **left sidebar** plus a **main content area** with a page title bar at the top. There is no top navigation bar on desktop.

Desktop

1. **Sidebar (left)** — collapsible via the chevron on the sidebar edge; collapse state is saved in browser storage.
2. **WRL PORTAL logo** (top of sidebar) — click returns you to your **default landing page** (first report your role can access, usually `/report`).
3. **Report links** — listed directly in the sidebar (only pages your role grants).
4. **Admin** — if you have admin pages, they appear under an **Admin** accordion (expand/collapse). When the sidebar is collapsed, Admin opens as a **popover** from the shield icon. Includes **Activity Log** (`/admin/security-audit`) for Super Admin only.
5. **Profile (bottom of sidebar)** — click your name/avatar to open a menu:
 - **My Profile** → `/profile`
 - **Settings** → `/profile?tab=settings` (password)
 - **Sign Out**

Mobile

- A **top bar** shows the logo and a **hamburger menu** that opens the same sidebar as a drawer.

If you need a page you do not see, contact your portal administrator.

Sidebar vs direct URL

Some admin routes exist but are **not listed in the sidebar**. Admins with permission can still open them by URL:

Page	Path	In sidebar
Read-model sync	<code>/admin/sync</code>	No
Service call activity	<code>/admin/attendance</code>	No
VPS Cron	<code>/admin/vps-cron</code>	No (super admin)

Legacy mail sub-routes (`/admin/mis-email-routing` , etc.) redirect to **Mail & Alerts** hub — use `/admin/mis-email-settings` .

Navigation reference (RBAC catalog)

Menu label	Path	Group	Sidebar
MIS Reports	<code>/report</code>	Reports	Yes
Call Distribution	<code>/report/distribution</code>	Reports	Yes
ARCP Claims	<code>/report/arcp-claims</code>	Reports	Yes
Serial Wise History	<code>/report/serial-audit</code>	Reports	Yes
Location Audit	<code>/report/location-audit</code>	Reports	Yes
Warranty Master	<code>/report/warranty-master</code>	Reports	Yes
Failed Calls - Athena API	<code>/report/athena-reconciliation</code>	Reports	Yes
Cancelled Calls	<code>/report/cancelled-calls</code>	Reports	Yes
User Management	<code>/admin/users</code>	Administration	Yes

Menu label	Path	Group	Sidebar
Roles & Access	/admin/roles	Administration	Yes
Mail & Alerts	/admin/mis-email-settings	Administration	Yes
Performance Insights	/admin/performance-insights	Administration	Yes
Read-model sync	/admin/sync	Administration	No
Service call activity	/admin/attendance	Administration	No
Activity Log	/admin/security-audit	Administration	Yes (under Admin; super admin only)

You only see menu items your role is granted. Full matrix: [04-RBAC/RBAC MATRIX.xlsx](#) .

3. MIS Reports (/report)

The main MIS hub has tabs (you may not see all tabs):

Tab	Permission	What it shows
Summary Dashboard	tab_mis_summary	Counts by status, aging buckets
Call Register	tab_mis_register	Row-level calls; click TRN for detail drawer
Key Account MIS	tab_mis_accounts	Account-level rollup
Client Import	tab_mis_client_import	Upload/delete client MIS files (capability also required)
Cadbury+Coke+CRM Summary	tab_mis_bd_mis_summary	BD-MIS with client import merge
Deployment Completion	tab_mis_deployment_completion	Deployment metrics

Common tasks:

1. Set **date range** and **branch** (or franchisee) filters at the top.
2. Click **Apply** or wait for auto-refresh.

3. Use **Export** for Excel/CSV where available.
4. On first load, filters start from your **role baseline** (assigned branches). Use **Clear all** on Call Register to reset filters on that tab.

Call detail drawer

Click a **TRN** in Call Register to open live call details from CRM (comments, history, flags if permitted).

4. Other reports

Each report has its own menu item with filters suited to that audit:

Menu item	Path	Use for
Call Distribution	/report/distribution	How calls spread across branches/franchisees
ARCP Claims	/report/arcp-claims	Claims register
Serial Wise History	/report/serial-audit	Repeat serial complaints
Location Audit	/report/location-audit	Visit location vs install address
Warranty Master	/report/warranty-master	Active machines and warranty
Cancelled Calls	/report/cancelled-calls	Cancelled register and export
Failed Calls (Athena API)	/report/athena-reconciliation	CRM ingestion failures

Open the page → set filters → browse or export. Behaviour matches the on-screen labels.

5. Administration

Available only to admin roles.

User Management (/admin/users)

- Create users with email, name, role, and office scope.
- Enable **MIS email** for users who should receive digests (also needs role capability).

Roles & Access (`/admin/roles`)

- Edit which pages and MIS tabs each role can open.
- Use the hierarchical editor for MIS tabs.

Mail & Alerts (`/admin/mis-email-settings`)

Single hub at `/admin/mis-email-settings` with tabs:

- **Org settings** — outbound mail enabled, allowed domains
- **MIS Email Routing** — scheduled routing rules and recipients
- **Major Repair Alerts** — branch/HQ recipients
- **Cancelled Calls** — daily digest recipients
- **VPS Cron & schedules** — super admin only; pause/resume VPS mail jobs
- **Subcontractor Stock** — SAP reconcile settings (ops)

Legacy URLs (`/admin/mis-email-routing` , `/admin/major-repair-alerts` , `/admin/cancelled-call-alerts` , `/admin/vps-cron`) redirect into this hub.

Access: `page_mis_email_settings` **or** `manage_users` / `manage_roles` / `view_all_offices` (OR-gate in RBAC catalog).

Page	Path	Notes
Read-model sync	<code>/admin/sync</code>	Status and refresh only (<code>manage_users</code>)
Service call activity	<code>/admin/attendance</code>	Technician activity export (<code>manage_users</code>)
Performance Insights	<code>/admin/performance-insights</code>	Sidebar link (<code>page_performance_insights</code>)

Super admin only: On MIS Reports → **Call Register** tab, button **CRM sync** → **yesterday** triggers VPS hot sync (not on `/admin/sync`).

6. Access by role

Production role configuration (who has which pages/tabs) is exported from the database:

- [04-RBAC/ROLES_SNAPSHOT.md](#) — permissions per role
- [04-RBAC/RBAC_MATRIX.xlsx](#) — full grid

Configured roles in production: BM - Serial Audit, Branch Manager, HOD, Mail access, Super Admin, View Summary. User counts change over time — see `ROLES_SNAPSHOT` for current numbers.

7. Profile (`/profile`)

Open from the sidebar footer menu → **My Profile**, or go to `/profile`.

Tab	What you can do
General	Display name, profile photo
Appearance	Theme (light/dark)
Email reports	MIS digest preferences (only if your role has MIS email capability)
Security	Change password

Branch and report access are managed by an administrator — not from Profile.

8. Common tasks

Task	Steps
Export register	MIS Reports → Call Register → Export
Request new page access	Email portal admin with your email and required report
Reset stuck filters	MIS Reports → Call Register → Clear all (other reports may use Reset filters on their toolbar)
Report wrong count	Note date range, branch, tab; contact admin with TRN if applicable

9. Tips

- Data in reports may be up to **~3 minutes** behind CRM; the call drawer is live.
- Excel digests use the same Cadbury-safe rules as email — counts may differ slightly from BD-MIS West zone on screen (see FMS).
- Do not share your login; each user should have their own account for audit purposes.

10. System verification

Portal facts (user counts, API routes, export date): [06-Delivery/SYSTEM_VERIFICATION.md](#) .
