

WESTERN REFRIGERATION PVT. LTD.

Known Issues & Limitations

Product: WRL Portal

Version: 1.0 draft

Date: 2026-09-02

Production: <https://wrl-dashboard.vercel.app>

Internal — Handover Documentation

Status: Ready — external-facing honest summary (not a marketing doc). Internal engineering backlog: `docs/REMEDIATION_ROADMAP.md` in the repository.

Audience: Stakeholders and ops.
Last updated: 2026-09-02

Design decisions and known limitations

From architecture §0.1 — deliberate simplifications, not immediate bugs:

Area	Decision / limitation	Upgrade path
RLS	Supabase Row-Level Security not used; RBAC + office scope in application code	Enable RLS if hard multi-tenant isolation required
Read-model staleness	<code>calls_latest_hot</code> can lag CRM ~3 min; call detail drawer hits CRM live	Acceptable for reporting; not real-time ops
UI test coverage	Near-zero <code>.test.tsx</code> ; server has targeted unit tests only	Playwright/Vitest browser tests when UI stabilises
Pagination	Some routes return all rows (register export); others paginate	Cursor pagination if row counts exceed ~50k
Module boundaries	Some shared logic remains in <code>src/lib/</code>	Lint rule when team grows
Email transport	All outbound mail via <code>sendDigestPayload()</code> / <code>sendHtmlEmail()</code> in mis-email	—
Email retry	Failed sends logged; next cron poll (~15 min) is retry	Dedicated retry queue if SLA tightens
CRM	MS SQL read-only; no portal write-back	—
VPS Postgres	Single-node; no HA replica	Managed Postgres if 99.9%+ uptime required

Handover pack notes

Item	Status
Admin User Guide	Text-only by design (no screenshots)
RBAC RoleMatrix in Excel	Live from DB on each export
VPS <code>.env</code> sign-off	Checklist requires SSH on production host
Postgres backup owner	Not documented in repo — ops gap

Residual items (internal engineering backlog)

1. `src/shared/` **empty** — platform helpers remain under `src/lib/`.
2. **No ReportPageClient component tests** — logic-only unit tests.
3. **ReportPageClient orchestration** — further shrink possible; does not block delivery.

These do not block production use of delivered reports and mail flows.

Operational notes

- **Mail slot dedupe:** One successful send per routing rule per IST window; failed sends wait for next cron.
- **Cadbury math:** Email digest uses Cadbury-safe rules; BD-MIS West zone keeps CRM Cadbury — counts may differ across surfaces (see FMS).
- **Subcontractor stock:** Full reconcile/send runs on VPS; portal relays manual actions when not on VPS host.
- **Diagram legibility:** Dense sequence diagrams — open `07-Company-Share/Diagrams/*.png` at full resolution or use Architecture Diagrams PDF (landscape pages for wide diagrams).

Reporting issues

1. Note URL, user role, date filter, and TRN/branch if applicable.
2. Check read-model sync status: `/admin/sync`.

3. For mail: `05-Operations/MAIL_SCHEDULE.md` and VPS `mail-scheduler.log` .
4. Engineering: <https://github.com/Vishun-Projects/wrl-dashboard>
