Mail Schedule

Product: WRL Portal

Version: 1.0 draft

Date: 2026-09-02

Production: <https://wrl-dashboard.vercel.app>

Internal — Handover Documentation

Status: Ready (repo-generated). Cron on VPS — verify with `crontab -l` on host.

Mail schedule (VPS cron)

Canonical schedule for outbound mail and mail-adjacent jobs.
Pause flags: portal **Mail & Alerts** → **VPS Cron** (`app_org_settings.vps_cron_jobs.paused`).
Bash jobs also gate via `scripts/vps-hosting/vps-cron-gate.sh` .

Job ID	Schedule (IST)	Script	Sends real mail?	Owner module
<code>mis_email_digest</code>	<code>*/15</code> Mon–Sat	<code>mis-email-digest.sh</code> or <code>mail-scheduler.sh</code>	Yes (when in user/routing IST window)	<code>mis-email</code>
<code>mis_email_test</code>	Optional ~14:00	<code>mis-email-test-digest.sh</code>	Yes (test recipients)	<code>mis-email</code>
<code>mis_email_watchdog</code>	09:50 Mon–Sat	<code>mis-email-morning-watchdog.sh</code>	Yes (alert if digest failed)	<code>mis-email</code>
<code>subcontractor_stock</code>	<code>*/15</code> daily	<code>subcontractor-stock-cron.sh</code> or <code>mail-scheduler.sh</code>	Yes (~ <code>send_time_ist</code>)	<code>subcontractor-stock</code>
<code>cancelled_call_digest</code>	16:00 via evening-ops	<code>evening-ops-sequencer.sh</code>	Yes (probe → ops; prod recipients when not <code>forceTo</code>)	<code>mis-email</code> + <code>cancelled-calls</code>
<code>evening_ops_sequencer</code>	16:00 daily	<code>evening-ops-sequencer.sh</code>	Yes (status + probes)	<code>scripts/vps-hosting</code>
<code>nightly_ytd_calls_export</code>	00:00 daily	<code>nightly-ytd-calls-export.sh</code>	May (midnight CRM delta)	<code>mis-email</code>

Job ID	Schedule (IST)	Script	Sends real mail?	Owner module
midnight_crm_delta_mail	05:30 fallback	midnight-crm- delta-mail- fallback.sh	Yes	mis-email
midnight_crm_delta_watchdog	00:30 + 02:00	midnight-crm- delta- watchdog.sh	Yes (alert)	mis-email
sync_worker_health	*/15	sync-worker- health- watchdog.sh	Yes (alert)	sync / lib

Not cron — sync worker: major-repair repeat alerts run inside `fast-close-sync-worker` after incremental sync (`mis-email/server/sync/major-repair-repeat-alert.ts`).

Unified poller: `mail-scheduler.sh` runs MIS digest + subcontractor steps in one `*/15` lock. Install: keep one crontab line pointing at `mail-scheduler.sh` instead of separate MIS + subcontractor lines.

Send transport: All MIS/cancelled/subcontractor compose paths use `sendDigestPayload()` / `sendHtmlEmail()` in [send.ts](#) (relay on Vercel, direct SMTP on VPS).
